

## SUMMARY

Data-driven professional pursuing a B.Tech in Data Science, combining hands-on experience querying and maintaining production MySQL databases with personal projects in dashboarding, statistical analysis, and predictive modeling. Skilled in SQL, Python, and Power BI for turning raw data into structured, reliable insight — with a proven ability to resolve data-integrity issues and translate findings into clear, decision-ready reporting.

## CORE SKILLS

|                  |                            |                        |
|------------------|----------------------------|------------------------|
| SQL & MySQL      | Data Cleaning & Validation | Python (Pandas, NumPy) |
| Excel (Advanced) | Power BI / Tableau         | Statistical Analysis   |
| Machine Learning | Data Visualization         | Git & GitHub           |

## EXPERIENCE

### Backend Developer | SFCollab

April 2026 – August 2026

- Queried, maintained, and optimized MySQL databases supporting a multi-user collaboration platform, ensuring accurate and reliable application data.
- Investigated and resolved data-integrity and backend issues, directly improving data accuracy and system stability.
- Built REST APIs to extract, structure, and serve data across the application, supporting downstream reporting needs.

### Frontend Developer Intern | Gwing Software Technologies

October 2024 – November 2024

- Built and tested responsive web interfaces, gaining exposure to how user data flows from interface to backend.
- Debugged UI issues using structured, methodical troubleshooting — a mindset applied directly to data QA.

### Operations Manager | Resolute Pvt. Ltd.

June 2023 – December 2023

- Tracked and reported on operational metrics (attendance, output, quality) for a team of 35+, using data to guide daily decisions.
- Analyzed workforce and production data to improve scheduling and reduce delivery delays.

## PROJECTS

### Sales Analytics Dashboard | Power BI, SQL, Excel

- Built an executive-style Power BI dashboard with interactive filters and drill-through reports, giving stakeholders real-time visibility into revenue and regional sales KPIs.

### Customer Churn Prediction | Python, Pandas, Scikit-learn

- Cleaned and engineered features from customer behavior data, then built and compared classification models to flag high-risk churn and surface its key drivers.

### Financial Risk Prediction | R, Shiny, Logistic Regression

- Developed an interactive Shiny application estimating financial risk probability from customer and transaction data, visualized through a real-time risk dashboard.

## EDUCATION

### B.Tech in Data Science

MLR Institute of Technology • 2024 – 2027

### Diploma in Embedded Systems

Govt. Institute of Electronics • 2021 – 2024
